

Faculty of Natural Sciences and Mathematics  
 Chemistry Department  
 Chemistry Education Study Program

Module name		Mathematics		
Module level, if applicable		1 <sup>st</sup> Year		
Code, if applicable		SPK – 102		
Semester(s) in which the module is taught		1 <sup>st</sup> semester		
Person responsible for the module		Basuki Abdurrahman, Drs., M.Si.		
Lecturer		Basuki Abdurrahman, Drs., M.Si.		
Language		Indonesia		
Relation to curriculum		<i>Compulsory</i>		
Teaching methods	Class size	Forms of active participation	Workload 136 hours	
Class discussion	50-60	Discussion	Lecture: 150 (min) x 16 (meeting)	40 hours
			Assignment: 180 (min) x 16 (week)	48 hours
			Independent study: 180 (min) x 16 (week)	48 hours
ECTS Credit		4.86		
Credit points		3 SCU		
Requirements according to the examination regulations		Minimum attendance at lectures is 75% (according to UII regulation)		
Recommended prerequisites		N/A		
Related course				
Module objectives/intended learning outcomes		<p>On successful completion of the course students should be able to:</p> <ol style="list-style-type: none"> <li>1. Explain basic mathematical concepts           <ul style="list-style-type: none"> <li>K-106-1A: explain the concept of the set of real numbers, Cartesian and polar coordinates, linear equations and determinants, sequence functions, limits, continuity, derivatives, theorem of mean value, Rolle's theorem, Taylor's theorem, extreme values, painting graphs, differentials, vector algebra, derivatives of vector functions.</li> <li>K-106-1B: explain the concept of indefinite integral: integration methods (substitutions, partials, rational fractions, goniometric functions)</li> </ul> </li> </ol>		

	<p>K-106-1C: explain the concept of certain integrals (Riemann): integral as the limit of the number, the average value of integral</p> <p>K-106-1D: explain the concept of improper integrals, the use of integrals of flat area, arc length, the volume of rotating objects, areas of rotation, the centre of mass and moment of inertia, double integrals, and their use to understand theoretical concepts in chemistry (structures), changes in energy and kinetics.</p> <p>2. Implement basic math on calculations</p> <p>K-106-2A: calculate cases related to the set of real numbers, Cartesian and polar coordinates, linear equations and determinants, sequence functions, limits, continuity, derivatives, mean value theorem, Rolle's theorem, Taylor's theorem, extreme values, painting graphs, differentials, vector algebra, derivatives of vector functions.</p> <p>K-106-2B: calculate Indefinite integrals: integration methods (substitutions, partials, rational fractions, goniometric functions)</p> <p>K-106-2C: calculate certain integrals (Riemann): integral as the limit of the number, the average value of the integral</p> <p>3. K-106-2D: calculate improper integrals, use integrals of flat area, arc length, the volume of rotating objects, areas of rotation, the centre of mass and moment of inertia, multiple integrals, and their uses.</p>
Content	<ul style="list-style-type: none"> <li>• concept of the set of real numbers, Cartesian and polar coordinates, linear equations and determinants, sequence functions, limits, continuity, derivatives, theorem of mean value, Rolle's theorem, Taylor's theorem, extreme values, painting graphs, differentials, vector algebra, derivatives of vector functions.</li> <li>• concept of indefinite integral: integration methods (substitutions, partials, rational fractions, goniometric functions)</li> <li>• concept of certain integrals (Riemann): integral as the limit of the number, the average value of the integral concept of improper integrals, the use of integrals of flat area, arc length, the volume of rotating objects, areas of rotation, the centre of mass and moment of inertia, double integrals, and their use to understand theoretical concepts in chemistry (structures). , changes in energy and kinetics, characterization, etc.).</li> </ul>
	Final score (NA) is calculated as follows:

Study and examination requirements and forms of examination	Intended learning outcomes	Weight (%)	Technique of assessment
	1	40	Written test: assignment, midterm
	2	60	Written test: assignment, final examination
Media employed	Power point slide presentation, video, Google classroom
